Marsaskala – MSK 1050  
Malta

***Subject: Public Statement – Monday 11 November 2019, 17:15 HRS***

Electrogas Malta Ltd notes that the weather forecast for Monday 11 November and Tuesday 12 November 2019 shows that Marsaxlokk Bay will be battered by Force 6 to 8 south and south-east winds and rough to very rough seas.

EGM is committed to operate the Delimara Powerplant in a safe manner, without compromise. Therefore, as a precaution and in advance of the deterioration of weather, the FSU tanker 'Armada LNG Mediterrana' will be repositioned into a 'spread or storm position', 70 metres away from the jetty in a transverse direction. One of the preventive measures adopted by ElectroGas Malta Ltd is a 'Spread Mooring System', which is designed to allow the tanker to remain berthed close to the jetty during severe weather conditions.

The Spread Mooring System is connected to the FSU tanker by way of custom-built winches on its deck, with a full double installation of chains and 8 Stevshark anchors weighing 35 tonnes at every corner of the ship. During such preventive measures, LNG will not be sent to shore and other backup energy sources will be used.

Electrogas Malta Ltd will resume with its operations after the storm passes, and once the FSU tanker captain determines that it is safe for the ship to berth at the jetty.
