

Environmental Policy

February 2020

ElectroGas Malta Ltd is a private entity, responsible for the operation of the Delimara LNG Terminal and Delimara 4 Power plant, generating electricity for Malta from LNG, in a safe and reliable manner.

ElectroGas Malta and its Contractors are committed to mitigate all environmental impacts resulting from the generation of electricity by combustion of natural gas and storage of LNG, by implementing an environmental management system, and to ensure that all operations are compliant with applicable environmental legislation. ElectroGas Malta commits that it will make appropriate resources available to achieve this.

To achieve our policy aims we will:

- Aim to identify best environmental options, and ensure that environmental impact is considered when planning or carrying out work.
- To promote energy efficiency in our operations, in relation to the emissions generated
- Communicate as a responsible operator on our environmental performance to stakeholders and the public
- Ensure that our Contractors have industry compliant environmental processes, policies and procedures.
- Maintain strict vigilance over all ElectroGas operations to ensure that these conform to the required standards, with a view towards evaluating scope for improvement

It is our aim to operate and maintain our facilities in a manner that protects the environment, prevents pollution and respects the context of our operations, as well as to foster a culture of environmental awareness in all our staff and Contractors. Protecting the environment is the responsibility of every staff member of ElectroGas and its Contractors.
